

Skills Translations

Given that the SLH offers multi-language support, we have also introduced translations for the skill module. First we will show you how to add and administer these, then we will list the entities which support translations.

Translations can be added in the "Edit" form of an object. We will exemplify with a competence edit form. Next to each field label that supports translations you will find a dictionary icon. When clicked, a modal will open in which you can add the translations - for one or more of the supported languages. Click Save and then you can close the modal - all interfaces that support translations (ex. profile widget, evaluation forms etc) will now use the translations you added.

img

If you want to delete a translation, proceed the same way: open the detail page > click on Edit > click on the translation icon > edit the translation in the modal > save > close modal.

Where translations can be added:

- competence group (title)
- competence (title, description), skills & indicators
- jobprofile title and description
- assignment title

Protected competence groups, competences (with skills and indicators) and jobprofiles cannot be edited and therefore do not support this translation mechanism
